Education

Virginia Tech — Blacksburg, VA
B.S. in Computer Science — *Aug. 2021 – May 2025*

University of Tennessee — Knoxville, TN
M.S. in Computer Science, concentration: Software Engineering - GPA 4.0 — *Aug. 2025 – December 2026*

Certification

AI Engineering Certification — AI Makerspace
AI Engineering Bootcamp - Cohort 7 — *June 2025 - September 2025*

Experience

Cyber Operations Intern — December 2025 – January 2026
American Systems Corporation — *Chantilly, VA*

- Performed incident response, security tool management, log analysis, and threat hunting.
- Successfully deploy password-sprayers, user enumerators, and MFA Token stealers to detect vulnerabilities.
- After exploiting these vulnerabilities, we were able to detect them through logs and prevent future attacks.

Associate Software Engineer — June 2025 – June 2026
Proven AI — *Leesburg, VA*

- Developed full-stack web applications for various customers utilizing different AI Engineering techniques such as RAG and custom Chunking methods.
- Fine-tuned AI models engineered for specific tasks, ranging from Video Language Models to simple open-source models.

Junior Software Engineer — June 2026 – Present
eve.ai, LLC — *Leesburg, VA*

- Promoted to Junior Software Engineer from Proven AI and was contracted out to work for eve.ai.
- Lead Developer of different contracts for customers building AI solutions, utilizing RAG, Vectorization, Custom-chunking, Video Language Models, and fine-tuning models.
- Conducted code-review before merging PR's into master and develop branches using Atlassians Git workflow strategies
- Deployed and Monitored multiple contracts to AWS and handled adjusting software to handle users at scale.
- Joined NVTC (Northern Virginia Technology Council) and attended multiple events through them, networking with like-minded people in the Tech sector.

Projects

ArcanAI | *ReactNative, Python, AppStore Connect, Google Play Store* — December 2025 - Present

- Developed a chatbot app for iOS and Android that allows users to upload their own .gguf open-source models on their phone and chat with them there, no Internet required and no data stored.
- Deployed on App Store, and in Beta currently for Google Play Store

FogReport.io | *NextJS, Python, PostgreSQL, RAG* — June 2025 - January 2026

- Foreign conflict simulator utilizing RAG, custom semantic chunking, embeddings, and multiple different OpenAI models with the purpose of giving detailed McNamara styled intelligence briefings based on the user's custom simulation.
- Vectorized a large dataset of Global Treaties to be used in the RAG system, providing necessary context before the briefings are generated.

Technical Skills

Languages: Java, Python, C, C++, SQL, JavaScript, HTML/CSS, R, Golang
Frameworks: React, Node.js, Flask, FastAPI, and more
Developer Tools: Git, Docker, Google Cloud Platform, VS Code, Cursor, Claude Code, Codex
Libraries: pandas, NumPy, Matplotlib, scikit, PyTorch, LangChain, HuggingFaceTranformers
MLOps: RAG, VectorSearch, Embedding, Fine-tuning, Model Evaluation
